

Callistomon salignus

Family : Myrtaceae

Habit : Tree to 10 m. May be spreading where space permits, or tall and narrow in forested areas. Bark is papery in a manner similar to many Melaleucas.

Habitat : Forested country adjacent to creeks, although often in positions quite elevated with respect to the creek.

Flowering : Spring

Collection site : GFP

Collection date : Sept 1987

Reference : K. Williams, Vol 1.

Flowers cream
